

FLIGHTTURF® - THE ULTIMATE CANADA GEESSE AND DEER DETERRENT

Wouldn't it be great if you could prevent geese and deer from settling on your property without having to resort to the cruelty and expense of lethal control methods? Methods that don't really work long term.

With innovative FlightTurf®, they don't like the taste, so they don't stay! You can humanely and successfully discourage these animals, and also eliminate the danger of Lyme Disease PERMANENTLY.

Consider FlightTurf®. This FAA-approved, patented native grass offers natural deterrence:

- Insects, birds and animals don't like it so they'll stay away.
- Maintenance costs go down - no mowing, feeding, or weed abatement required.
- Installation is easy - JUST START APPLYING THE SEED!

What you can do TODAY is use FlightTurf®.

Developed originally for airports to discourage wildlife and eliminate mowing, FlightTurf® is an ideal grass option for anyone looking for an easier way to manage large open spaces. After years of growing, we've come to realize FlightTurf® is happiest if you just leave it alone - less mowing the better! Contact us to learn how this innovative grass will enhance your site and reduce your expenses.

By helping us with our business, you are choosing to support conservation programs for the sole benefit of protection of wildlife - 10% of our net profits will be donated for land conservation specifically to benefit wildlife.

- **Geese and deer deterrence**
- **Lyme disease prevention**
- **Insect resistance**
- **Easy germination**
- **Erosion control**
- **Biomass integration**
- **Full sun & shade**
- **Weed resistance**
- **Drought tolerance**
- **Cold tolerance**
- **Low maintenance**
- **No mowing needed**
- **Disease resistance**
- **Fire prevention**
- **Salt tolerance**
- **Traffic resistance**
- **Soil stabilization**

FlightTurf installation recommendations;

Seeding FlightTurf is similar to any typical grass installation. Consider your soil conditions and prepare the area intended for FlightTurf. Important to clear the soil of weeds and root structure in advance.

Choose mechanical or manual methods to seed the area. Apply at a rate of approximately 400 lbs seed per acre. Reseeding should be considered within a 1 to 3 month period and as needed to eliminate bare areas and to block weed intrusion.

Very minor mulching should be considered over the seeded area and daily watering to accomplish germination during the first few weeks.

Consider mowing if you want a golf course fairway look – remember the less mowing the better.

Consider dethatching at reasonable intervals to enhance the look of FlightTurf – this isn't a necessary effort.

Enjoy your FlightTurf.
