

Typical mowed vineyard floor

FLIGHTTURF® - THE ULTIMATE VINEYARD FLOOR

Save money on herbicides that pollute your vineyard and toxify your grapes. Your customers will appreciate knowing it's not in the wine you produce. Go organic.

Spending money and energy on maintaining your vineyard floor – discing, rototilling, alternative planting – to just have to repeat the process every year?

Imagine your vineyard floor – pristine like a golf course fairway – without the maintenance – without the water – without fertilizing – without mowing – sustainable. Return to Nature with Native Return® FlightTurf®.

Our native grasses are specifically formulated with a patented seed mix to provide all the benefits with only positive results on your vineyard – with one tenth of the maintenance.

We at Native Return® provide the expertise to guide you through the conversion process using your own labor and resources. Next time, instead of doing maintenance on your vineyard floor, DO FlightTurf® AND MAKE IT THE LAST TIME!

- Insect resistance
- Easy germination
- Erosion control
- Biomass integration
- Full sun & shade
- Weed resistance
- Drought tolerance
- Cold tolerance
- Low maintenance
- No mowing needed
- Disease resistance
- Wildlife deterrence
